Marker gain is tiny for every algorithm
0.01 = smallest gain usually considered clinically relevant
Logistic regression
Ridge/Lasso/elastic-net LR
Decision tree
k-nearest neighbours
SVM (RBF kernel)
Random forest
−0.010
−0.005
0.000
0.005
0.010
0.015
Change in ROC-AUC vs. M2 (corrected 95% CI)
Both markers (M3 − M2)
NLR only
hs-CRP only
